Book & Media Reviews

For the graduate student in organic chemistry, Organic Structural Spectroscopy would be a far better choice than SIOC It provides a much better foundation in theory, integrating related techniques and presenting state-of-the-art methods, without sacrificing the detailed discussion of spectral inter-pretation so necessary for routine spectral

Understanding NMR Spectroscopy

The picture that we use to understand most kinds of spectroscopy is that molecules have a set of energy levels and that the lines we see in spectra are due to transitions between these energy levels Such a transition can be caused by a photon of light whose frequency,

ν , is related to the energy gap, ΔE , between the two levels according to: $\Delta E = h\nu$
